### **BioMedix™ Releases PADnet™ DMS 2.0 Advanced Vascular Program Solution for Hospitals**

Saint Paul, MN – November 8th, 2010 – BioMedix™ Vascular Solutions, Inc. announced today the release of PADnet™ Disease Management System 2.0 (PADnet™ DMS 2.0) – the enriched and redesigned evolution of its original innovative product, PDMS. The new PADnet™ DMS 2.0 features advanced reporting capabilities and a web-based interface that allows Healthcare Administrators to access and analyze network activity, accurately track referral patterns, and easily view and print reports.

PADnet™ DMS 2.0 lays the foundation for organizations to benchmark by procedure and clinician, and to make informed decisions about quality of care. It includes a turnkey collaborative care program designed to find patients with vascular disease (P.A.D./CVI) as early as possible in the community via BioMedix™ PADnet™+ in-office vascular testing devices. The seamless network connects patients with the best interventionalist for higher levels of study and intervention, leading to better care and business performance. The comprehensive suite of web-based tools implemented in the continuum of care platform enables hospitals to track clinical and financial outcomes of their vascular labs and interventional suites.

“We are extremely proud of our most recent PADnet™ Disease Management System and believe the underlying technology represents another example of our commitment to being a meaningful contributor to healthcare reform,” stated BioMedix™ CEO John Romans. “PADnet™ DMS 2.0 is already playing a critical role in enabling physicians and administrators to collaborate to offer enhanced patient care in a more cost effective and seamless manner.”

The newly designed PADnet™ DMS 2.0 Network Reporting Dashboard has advanced functionality and is the cornerstone of referral and financial data analysis for diagnostic and interventional suites. Customizable to each healthcare facility, the PADnet™ DMS 2.0 solution offers key benefits for Healthcare Administrators: searchable financial analysis for any given period, real-time program tracking and complete transparency for quantifiable program results. Advanced graphing and reporting options, such as abnormality rate, procedure type, patient history analysis, referrals to interventional suite and revenue analysis, facilitate evidence-based decision-making.

“We use the PDMS program to achieve three goals: To strengthen the relationship between our referring physicians and our vascular specialists, to create a structure around which multiple physician groups (cardiology, vascular surgery and soon radiology) participate in a program with common reporting structures, and to increase volumes, both in imaging and procedures,” said Mike Rasmussen, Executive Director, Metropolitan Cardiology Consultants Vice President, Cardiovascular Services, Mercy Hospital.
