

Collaborative Practice Solutions

Seamlessly transition to EHR with CPS and BioMedix™ TRAKnet™ PM - DPM Edition

Collaborative Practice Solutions, LLC (CPS) service is an addition to the BioMedix™ implementations and training process that is included in your TRAKnet™ PM - DPM Edition solution purchase. CPS service includes an analysis of your practice by podiatric physicians and administrators to provide comprehensive guidance designed to streamline technology implementation and training for a quick and easy transition.

Collaborative Practice Solutions, LLC (CPS)

In addition to the excellent BioMedix™ implementation and training team services, your TRAKnet™ PM - DPM Edition solution purchase also includes a very unique service designed to help you and your staff adopt TRAKnet™ PM - DPM Edition technology. Run by well-known podiatric physician, speaker and author John Guiliana, DPM, MS, and a team of physicians and administrators, CPS will help you and your staff make this transition as easy as possible. It starts with an analysis of your practice and its work flow.

Understanding your current work flow will help your team prevent challenges that often occur when trying to place a round peg in a square hole. You will be receiving a practice survey to complete that will guide us towards optimizing your implementation training process.

Collaborative Practice Solutions, LLC provides:

- Comprehensive pre-implementation practice surveillance and report card
- Pre- and post-implementation guidance, timelines and protocols designed to begin CPS support starting eight weeks prior to "go live" and end eight weeks after "go live"
- Workflow assessment to optimally incorporate EHR technology and Meaningful Use compliance
- Change management guidance with physicians and/or staff through conference calls, webinars, Skype, etc.

TRAKnet™ is Accepted
